Explore the Future of Technology and Science

What does this future look like? What are the implications for society as a whole?
How can we prepare ourselves for these changes?
These are all important questions that we must ask and attempt to answer as we move forward into the next 100 years.

Building a better future.

Technology can help us find sustainable solutions to some of humanity's most pressing problems like food and water shortages, climate change, poverty and disease.

Improved quality of life.

Self-driving cars, augmented reality glasses, and better prosthetics for people with disabilities will improve the quality of life for many people around the world.

Ethical dilemmas.

Explore some of the ethical dilemmas that may arise from new and emerging technologies, such as how they can be abused or used to violate people's privacy.

Government regulations.

How might government agencies regulate the use of these technologies in order to promote public safety, health, and welfare?
